Ember
Glass

Cover the rooms in your home with electric radiant heat simply by hanging an Ember radiant panel on your wall. The panel uses infrared heat to evenly and cleanly distribute warmth to inhabitants in the room.

This sleek panel can be mounted vertically or horizontally in any room in your home to provide primary or supplementary heat. When mounted vertically, towel bar accessories can be installed for added functionality.

Furthermore, Ember Glass radiant panels enable homeowners to experience the luxury of simple installation. Mounting a radiant panel is so easy that anyone capable of hanging a picture on a wall can do it. Mounting only takes between 5 and 10 minutes.
